CIGRE Study Committee A2

PROPOSAL FOR THE CREATION OF A NEW WORKING GROUP (1)

| JWG* N° A2.54 | | Name of Convener : Christoph Ploetner (DE) E-mail address: <u>christoph.ploetner@de.abb.com</u> | |
|---|--|--|--|
| Technical Issues # (2): 8 | | Strategic Directions #(3): 1, 3 | |
| The WG applies to d | istribution networks (| 4): Yes | |
| Title of the Group: P | ower transformer aud | ible sound requirements | |
| Scope, deliverables | and proposed time so | hedule of the Group: | |
| Distribution, Power, and Determination of sound to determine the sound transformer industry is h sound level ranges and Sound levels are freque to technically fulfill then enclosures. One of the rare docum Association (NEMA), na EN-50464-1. All those being not up-to-date. For work in that area for Reactors" studied and p | Regulating Transformers levels" define very well the power level of power transformers towever suffering from not this repeatedly results in ntly specified unnecessa in without external sound ents in that area is a US uned No. TR1-1993 (R20 documents are either int urther, IEC TC14 express transformers. Recently, " proposed ranges for refer | 7.12.90 "Standard Test Code for Liquid-Immersed a" and IEC 60076-10 "Power transformers – Part 10: the measurement of audible sound emission and how asformers during acceptance testing from there. The thaving reference / guidance on typical transformer technically unreasonable sound level specifications. ry high but more recently often also too low in order mitigation means such as sound panels or sound S standard of the National Electrical Manufacturing 000). Other documents are EN 4871, VDI 3739 and ernationally not recognized and / or are known as sed to SC A2 the need of some pre-standardization WG A2.48 "Technologies and utilization of Shunt ence sound levels of Shunt Reactors and this work tudies on power transformers. | |

Scope

- Units to be considered: distribution and power transformers with $S = 10 \text{ kVA} \dots 1500 \text{ MVA}$.
- Description of basic sound development mechanisms distinguish between no-load and load condition and cooling system. Describe techniques on how to combine these components.
- Define a minimum of necessary transformer classes with respect to sound level development.
- Development of sound level ranges for all three components per transformer class.
- Distinction between 1O and 3O units and 50Hz / 60Hz units
- Study and provide information on sound level legislation in different countries and compare with technical findings.
- Summary information on sound mitigation (mounting, panels, enclosures, walls around units)

Deliverables/time schedule

The work will be finalized with a brochure, a workshop and a short report in Electra:

- Fall of 2015: Starting of the working group
 - End of 2017: Interim Report
- August 2019: Final Report (Brochure)

Comments from Chairmen of SC concerned:

Approval by Technical Committee Chairmar.

Date : 09/10/2015

M. Wald

(4) Delete as appropriate

Table 1: Technical Issues of the TC project "Network of theFuture" (cf. Electra 256 June 2011)

| - | |
|----|---|
| 1 | Active Distribution Networks resulting in bidirectional flows within distribution |
| | level and to the upstream network. |
| 2 | The application of advanced metering and resulting massive need for exchange of |
| | information. |
| 3 | The growth in the application of HVDC and power electronics at all voltage levels |
| | and its impact on power quality, system control, and system security, and |
| | standardisation. |
| 4 | The need for the development and massive installation of energy storage |
| | systems, and the impact this can have on the power system development and |
| | operation. |
| 5 | New concepts for system operation and control to take account of active customer |
| | interactions and different generation types. |
| 6 | New concepts for protection to respond to the developing grid and different |
| • | characteristics of generation. |
| 7 | New concepts in planning to take into account increasing environmental |
| | constraints, and new technology solutions for active and reactive power flow |
| | control. |
| | |
| 8 | New tools for system technical performance assessment, because of new |
| | Customer, Generator and Network characteristics. |
| 9 | Increase of right of way capacity and use of overhead, underground and subsea |
| | infrastructure, and its consequence on the technical performance and reliability of |
| | the network. |
| 10 | An increasing need for keeping Stakeholders aware of the technical and |
| | commercial consequences and keeping them engaged during the development of |
| | the network of the future. |
| L | |

Table 2: Strategic directions of the TC (cf. Electra 249 April 2010)

| 1 | The electrical power system of the future |
|---|---|
| 2 | Making the best use of the existing system |
| 3 | Focus on the environment and sustainability |
| 4 | Preparation of material readable for non-technical audience |
